INTRODUCTION

I graduated from the University of Information Technology in 2014 with a Bachelor of Computer Science, focusing on Natural Language Processing and Machine Learning. Since graduating, I have been working with multiple large companies and building up my technology stack.

I became a full-time developer in 2012. I have spent the majority of my career focused on Java, moving from the role of Java Developer to Java Full-Stack Developer. I have recently also expanded my technology stack into learning Golang, ReactJS, and Microservices (Redis, Memcached, Kafka, MyBatis, Dubbo and K8s), whilst continuing to build Java Enterprise applications.

TECHNICAL SKILLS

Back End: Java, Spring, J2EE, Golang.

Front End: JavaScript, HTML / CSS, ReactJS, JSP.

Tools: JIRA, Confluence, GitHub / GitLab, Jenkins / GitLabCI.

Databases: MongoDB, Hibernate, MyBatis, MySQL, Redis, Memcached.

Cloud Services: Kafka, Heroku, AWS S3.

Testing Tools: Jest, Junit, TestNG, Robot Framework, Apache JMeter.

DevOps Tools: Docker, K8s, Linux.

CODELINK.IO

TimeTemp - Mobile & Web Application

<https://timetemp.io>

Platforms: Rails, React Native, ReactJS

- TimeTemp web handles the full process of managing management teams and temporary employees, with functionality for Recruiters, Managers and Employees.
- TimeTemp is full integrated to the Vincere ATS system.
- I handled part of back-end development in Rails and the web front-end in ReactJS.

Codelink IO - Team & Project Management

<https://codelink.io>

Platforms: Rails, Golang, ReactJS

- Internal team and project management system to manage all team members and their assigned projects.
- Internal team management tool authenticates and authorizes different user types through a centralized SSO service to handle authentication.
- I worked as the sole developer to set up the platform and the SSO service.

Bagang – Online Loan App

<https://bagang.com.vn>

Platforms: Java, SpringBoot, ReactJS, Dubbo, K8s

- The mobile app gives fast and easy personal loan.
- I worked as a full-stack developer of backend service, includes cloud microservices and internal web system to support operation team proceed user's application for loan.

WORKING HISTORY

Laudert Vietnam (2016 - 2019)

Solution Engineer

- Created Print Media from a variety of Java enterprise databases and PIM systems with EJB applications that worked as publication servers with automation inDesign as frontend.
- Developed additional products to boost development: a Golang reverse proxy to debug/hijack Request and a framework to fix and enhance 3rd-party applications.

TMA Solutions (2012 - 2016)

Java Full Stack Developer

- Worked as a team-lead to develop and test a web application called TextIntegration. TextIntegration integrates sending and receiving SMS promotions into CRM businesses. The application at the time of development was live and used by hundreds of Infusionsoft's customer base.
- Worked on developing client-server application software named AxS to manage Network Devices.
- Key developer of OSS Alarm Dispatcher application that uses JMS to listen to device failures passively and SOAP endpoint to actively query/update device state. Created the very first RESTful prototype of the project.

EDUCATION

University of Information Technology – Vietnam National University, Vietnam

Completed my thesis on Natural Language Processing and Machine Learning
